                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immortalized rabbit smooth muscle cell line.";
am. J. Pathol. 143:518-527(1993).
-i- FUNCTION: THE HEBARIN BINDING GROWTH FACTORS ARE ANGIOGENIC AGENT:
    IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN
    VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
    CONCENTRATION OF THESE 2 GROWTH FACTORS.
-i- SUBUNIT: MONOMER.
-i- MISCELLANEOUS: THIS PROTEIN BINDS HEPARIN MORE STRONGLY THAN DOES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BINDING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. -I- FUNCTION: THE HEBARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENT
IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN

VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.

-I- SUBUNIT: MONOMER.

-I- SIBILIARITY: BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=90201563; PubMed=2318343;

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Perfect score:
                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                          Score.
